

Project selection

Group name / number: Group 1

Group members: Camilla Dall Malling, Fabio Telesca, Rares Tutunea, Richard Svajdlenka, Svetoslav Trifonov and Xenia Cebanova.

Project ranking:

Option 1 - ResQFlow – Emergency Dispatcher

Option 2 - EcoRoute – A Green Transport Comparator

Option 3 - ShareARide – Community Transportation Sharing System

Project name: ResQFlow

Why would we choose this project?

The project gives good opportunity both for complexity for the experienced group members but also learning opportunity for the less experienced.

Real world application, it feels like a project where we see potential usage.

Everyone in the group had interest in the project and quickly entertained solution ideas for how it could work.

Why would we not choose this project?

It could become too complex for inexperienced group members to confidently defend at the oral exam.

The command line interface will be very clunky. Due to managing multiple incident responses at once.

The difference in experience between the group members could cause strain on the experienced group members.

Project feasibility and background research

The Danish regional hospital websites offer quarterly reports on their emergency dispatch vehicles, they divide these into the categories of A, B, C, D and E emergency dispatches. Fx. A is any emergency that requires a 15min or less response time, here they send out lifesaving services like paramedics and emergency doctors.

Research and documentation on the response time of police vehicles is dependant on if the priority is urgent (priority 1) which ranges from 8 to 10 minutes and non-urgent (priority 2 & 3) where response times can range from 30 minutes to several hours if there aren't any units available.

Group fit and learning goals

This project fits the group well because it has room for complexity and learning even for the experienced group members. Our group has a large majority of experienced members, who

have added this part

bring varied expertise and a willingness to teach the others, so we decided this would be the perfect project for that.
